

No More Ironing

If you usually are too busy to spend much time on ironing your clothes, here is your saviour-Mr James Night, a student at the University of Western Sydney, who has invented a washing machine that does not crease clothes while washing them. The secret is in the special design of the device; clothes are hung in a waterproof chamber and washed by ultrasound, then dried with hot air and thus no extra ironing is required. James Night's invention was well accepted by manufacturers who promised to have the device ready and for sale in a few years time. So, iron haters from all around the world hold on just a little longer; help is on the way!

To Mars and Back

The Japanese Educational, Culture, Sports and Science Ministry conducted a survey, asking over 2,700 professors and scientists about their expectations on scientific discoveries in the future. The results showed that in 20 years there will be a cure for AIDS and cancer, robots will wash our dishes and clothes, high-speed trains will be the most common means of transport, a space base for scientific research will be built on the Moon and people will travel freely to Mars. So, we can all hope for a far brighter future in the yellow fields of Mother Mars!

Clever Devices

You cannot cook! Me neither! But soon our problem will be solved as the German company Blomberg develop domestic devices of a new generation. Their ovens, washing machines, fridges and dryers are well designed and multi-functional. But their main advantage is the special Logitronic display which helps users to choose the necessary programme and gives useful advice on the matter. For example it is always good for someone to remind you not to cook the dish for more than 40 minutes, not to leave the fridge door open for too long, not to over dry your clothes as you will not be able to iron them later and so on. Well, with such a device at my disposal I can surely become the housewife of the month!

Now We Are Talking

The first talking washing machine in the world was produced by the Electrolux Company for the exclusive needs of middle-class women in India. A survey conducted earlier showed that most housewives in India dreamt of a device that is able to tell them exactly what to do in order to use it properly. On that basis the talking washing machine was created with a range of 20 simple sentences, telling the user to 'Pour in the washing powder', 'Close the lid', 'Get ready', 'Wait' both in English and Hindi. All these directions are given by a tender woman's voice to the sound of a piano playing. So, if you are longing for an intellectual conversation you had better do the washing!

Bulgaria's Famous Shopska Salad

Here is the original recipe:

Ingredients:

- 4 tomatoes
- 2 cucumbers
- 2 roasted peppers or fresh green peppers
- 2 spoonfuls chopped parsley
- 2 spoonfuls chopped onion or green onion (optional)
- half a pound of white cheese
- salt, vinegar, oil to taste

Preparation:

Cut the tomatoes, cucumbers and peppers in small pieces, cubes if possible. Mix well with the parsley, onion, salt, vinegar and oil. Serve with white cheese grated on top and a glass of traditional home made Bulgarian 'rakia' - a strong grape or plum brandy. Enjoy!
